WITH BREATHTAKING VIEWS, THE FAIRHAVEN SURF LIFE SAVING CLUB IS A STUNNER

Completed in 2012, the Fairhaven Surf Life Saving Club is a redevelopment project made from GL10 White Cypress. Built to withstand the elements of nature, this beautiful building is constantly exposed to severe weather events, King tidal waves and is partly built on-top of eroded sand dunes. All of which can affect the structure of the building.

Luckily, our glulam beams are made to withstand such extremes and provides a captivating feature that compliments the landscape of the Great Ocean road. With breathtaking views of the sunset along Fairhaven beach, this challenging project was built for functions and events in mind.

The surf club boasts a large ground floor, dedicated reception area and a main club room with kitchen and bar facilities. All featured rooms are accompanied with beautiful Glulam beams that stretches across the ceiling and out onto the open balcony. branches' that can be seen above the stairs and into the open space, all at precise angles and degrees.
